                                                                        Nature 390:249-256(1997).
-!- CATALYTIC ACTIVITY: CDP-diacylglycerol + L-serine = CMP + 3-0-sn-phosphatidyl-L-serine.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the CDP-alcohol phosphatidyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Acts as a regulator of post DNA replication initiation. Associates with chromatin during G1 and S phases of mitosis.

"Complete genome sequence of the alkaliphilic bacterium Bacillus halodurans and genomic sequence comparison with Bacillus subtilis.";
Nucleic Acids Res. 28:4317-4331(2000)
-!- FUNCTION: Site-specific tyrosine recombinase, which acts by catalyzing the cutting and rejoining of the recombining DNA molecules. The xerC-xerD complex is essential to convert dimers of the bacterial chromosome into monomers to permit their segregation at cell division. It also contributes to the segregational stability of plasmids (By similarity).

SUBUNIT: Forms a cyclic heterotetrameric complex composed of two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Publication of the property of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -i- SUBUNIT: Monomer.
-i- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-i- SIMILARITY: Belongs to the Nudix hydrolase family. DIPP subfamily.
                                                                                                   in a diphosphoinositol polyphosphate phosphohydrolase.";
EMBO J. 17.6599-6607(1998)

-!- FUNCTION: Cleaves a beta-phosphate from the diphosphate groups in pp-InsPS (diphosphoinositol pentakisphosphate) and [PP]2-InsP4 (bisdiphosphoinositol terrakisphosphate) and [PP]2-InsP4 pp-InsP5 (diphosphoinositol terrakisphosphate), suggesting that it may play a role in signal transduction. InsP6 (inositol hexakisphophate) is not a substrate. Acts as a negative regulator of the ERKI/2 pathway. Also able to catalyzes the hydrolysis of dinucleoside oligophosphates, with Ap6A and Ap5A being the preferred substrates. The major reaction products are ADP and p4a from Ap6A and App and APF from Ap6A. Also able to hydrolyse PRPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (5-phosphoribosyl 1-pyrophosphate).
-!- CATALYTIC ACTIVITY: Diphospho-myo-inositol polyphosphate + H(2)O :
myo-inositol polyphosphate + phosphate.
-!- COFACTON: Magnesium.
-!- ENZYME REGULATYON: Inhibited by fluoride and InsP6.
-!- BIOPHYSICOCHEMICAL PROPERTIES:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

```
3B9 was positive. cDNA clones of the 3B9 light and heavy chains were cloned into pGEM7f+ and transformed into E. coli DH5-alpha. A light chain cobh clone was sequenced (AAQ03490) that encoded the protein given in AAR70189. 3 CDR8 (AAR70195-97) were identified. (Updated on 25-MAR-2003 to correct PN field.)

The specification describes chimeric and humanised ILL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic renfinits, conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by BLISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Light chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin B-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy;

The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic demantitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft

                     an epitope specifically bound by an antibody expressed by a clone such as clone $25, C25, C25, C39, IC6 and clone 1F3, where the antibody binds to and neutralises botulinum neurotoxin type A (BONT/A). Also included are a polypeptide comprising BOMY/A neutralising epitope comprising an epitope which is specifically bound by the antibody, where the polypeptide is not a tull-length botulinum neurotoxin Hc fragment and making an anti-BONT/A antibody that neutralises BONT/A (by contacting several antibodies with new epitope specifically bound by an antibody expressed by any of the novel clones and isolating an antibody expressed by any of the epitope). The antibody is useful for neutralising a BONT/A, by contacting botulinum neurotoxin type A with the antibody comprising VH CDE (heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a light chain variable region (VL) of a single chain antibody (scFv) of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             from an organism
The invention relates to an isolated antibody that specifically binds to
                                                                                                                                                                                                                                                                                                                                                                                                       chain variable region complementarity determining region) and with a second anti-BoNT/A antibody which comprises a VH CDR, where the second antibody binds to a different epitope than the first anti-BoNT/A antibody. The antibody is useful in the treatment of pathologies associated with botulinum neurotoxin poisoning, for rapid detection/diagnosis of botulism and in the detection and/or quantification of BONT/A in a biological sample obtained from an organiswhich is indicative of a Clostridium botulinum infection of the organis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BOMT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clone comprising BOMT/A). Also described are: a polypeptide (II) 3-1, 3-3, 3-10 and ING1, where (I) binds to and neutralises botulinum curvalising BOMT/A). Also described are: a polypeptide (II) comprising BOMT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I) producing (I); and a composition (III) comprising several anti-comparising bown antibodies, where each antibody is specific for a different epitope of a botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies contacting neurotoxin with (I) is susful for neutralising comparition of antibodies shows greater toxin neutralisation than the supplex the following are disclosed: a pharmaceutical composition comprising (I); and a kit comprising (I). (I) is susful for neutralising specific for a different epitope of the botulinum neurotoxin which combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism of single antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism conforming. (I) exhibits specificity and affinity towards BOMT/A. (I) enables rapid detection or diagnosis of botulism. This is the conformation of antibodies and diagnosis of botulism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated with botulinum neurotoxin poisoning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                antibacterial; antibody; botulinum neurotoxin type A; BONT/A; BONT/A neutralising epitope; anti-botulinum neurotoxin antibody; toxin neutralisation; botulinum neurotoxin poisoning; mouse; light chain variable region; single chain antibody; scFv.

The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans. The present sequence represents the light chain variable region of Ig REI, and is used in the course of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The invention comprises anti-protein C inhibitor (PCI) antibody. The anti-PCI antibody of the invention is useful for treating or preventing a disease which develops and/or progresses due to reduced activated protein C (aPC) activity. Such diseases include: sepsis, disseminated intravascular coagulation, and arterial thrombosis. The present amino acid sequence represents a mouse anti-protein C inhibitor antibody.
                                                                                                                                                  New anti-protein C inhibitor (PCI) antibody, inhibiting PCI with respect to activation protein C (apc) activity, and apc production by thrombomodulin composite, useful for treating sepsis, arterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated antibody that neutralizes botulinum neurotoxin type A, useful for diagnosing botulism or for treating pathologies associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antibacterial; antibody; botulinum neurotoxin type A; BONT/A; BONT/A neutralising epitope; anti-botulinum neurotoxin antibody; toxin neutralisation; botulinum neurotoxin poisoning; mouse; light chain variable region; single chain antibody; scFv.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (19E) mediated diseases. The antibodies are useful for the treatment of allergic disoasers such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               anti-protein C inhibitor antibody; anti-PCI antibody; activated protein C; aPC; sepsis; disseminated intravascular coagulation; arterial thrombosis; protein C inhibitor; mouse; murine.
              Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allaregic disorder; allergic khinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.

Charles where (1) binds to aim incurantees boulding to an epitope specifically bound by an antibody expressed by a clone chosen from clone $25, C35, C39, 106, 302, 84, 187, huc2s, Arl, Ar2, WRI(V), WRI(T), 3-1, 3-1, 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum comparising BoNT/A neutralishing epitope having an epitope tide (II) comprising BoNT/A neutralishing epitope having an epitope tide (II) comprising BoNT/A neutralishing epitope having an epitope tide (II) comprising BoNT/A neutralishing epitope having an epitope tide (II) is producing (I); and a composition (III) comprising several antibodies properties of a botulinum neutrotoxin antibodies, where each antibody is specific for a different epitope of a botulinum neutrotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition comparising (I). (I) is useful for neutralising BONT/A antibody and for neutralising a botulinum neutrotoxin which involves contacting neutrotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neutrotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neutrotoxin confidence of a mouse light chain variable fragment anti-botulinum toxin confidence of a mouse light chain variable fragment anti-botulinum toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The signal sequence is also provided in AAR70194. The sequences of the 3 CDRs are identical to mouse anti-human IL-4 MAB 3B9 light chain CDRs (given in AAR70195-97). (Updated on 25-MAR-2003 to
                                                                                                           The sequences given in AAR29008-09 were encoded by plasmids which were used in example to illustrate the production of a human antibody which recognises human interleukin-6 receptor (IL-6R). The antibody comprises light (L) chain and heavy (H) chain variable regions which were derived from a mouse monoclonal antibody produced from the hybridoma AUK64-7 which contained the plasmids p64-k4 and p64-h2. (Updated on 25-MAR-2003 to correct PN field.)
         Reconstituted human antibody to human interleukin-6 receptor - has low antigenicity and contains mouse V-region complementarily determining regions.
